PROFESSIONAL SUMMARY

I'm a Java and Spring Boot developer with 4+ years of backend experience, mostly in fintech. I've worked on NPCI file processing pipelines — receiving mandate files from NPCI, processing them through validation, parsing, encryption, and digital signature verification, and sending the output back to NPCI in the required format. Before software, I spent two years as a System Administrator, which taught me how real infrastructure works and made me a more practical backend engineer. I enjoy solving complex backend problems — whether it's designing event-driven flows with Kafka, integrating payment gateways, or wiring up LLM integrations with Spring AI.

CORE SKILLS

Languages & Frameworks: Java (8/11/17/21), Spring Boot, Spring MVC, Spring Security, Spring AI, Hibernate, REST APIs, JUnit

Microservices & Messaging: Microservices Architecture, Apache Kafka, Event-Driven Design, CI/CD Pipelines, Jenkins

Cloud & Storage: AWS (S3, SQS, DynamoDB), MySQL, Database Query Optimization, Docker

Payment Integrations: Stripe, Stripe Connect, PayPal, Razorpay, Easebuzz, Amazon Pay

Security & Standards: AES Encryption, Digital Signature Verification, RBAC, Webhooks, Secure Coding

Third-Party Integrations: NPCI File Processing, Twilio (OTP/SMS), Bank APIs, Webhooks, SonarQube, Git, Bitbucket

AI & GenAI: Spring AI, OpenAI, Gemini, Ollama, OpenRouter, RAG Pipelines, Prompt Engineering, LLM Integration, MCP Server (Java)

WORK EXPERIENCE

Java Developer · **Artcode Private Limited, Pune** · Nov 2023 – Present

- **NPCI file processing pipeline** — receives XML/TXT mandate files from NPCI, validates, parses, encrypts using AES, applies digital signature verification, and sends processed output back to NPCI in the required format. Zero compliance failures since go-live.
- **Integrated third-party bank APIs** — handling mandate verification, execution, rejection flows, and retry logic without any data loss across high-volume batches.
- **Refactored core modules with Spring Boot + Microservices** — cut API response times by 50% and improved overall throughput by 40%.
- **Automated Jenkins CI/CD pipelines** — streamlined build, test, and deployment cycles; reduced manual deployment effort significantly.
- **Unit testing with JUnit** — wrote and maintained test suites across critical service layers ensuring code reliability before every release.
- **Tightened security** — implemented RBAC, secure coding standards, and rigorous testing, improving security posture by 30%.
- Mentored 5 junior developers — cut onboarding time by 40% through structured walkthroughs, code reviews, and documentation.

Java Developer · **Maxgen Technologies Pvt. Ltd., Pune** · May 2022 – Oct 2023

- **Built scalable web applications with Spring Boot & Hibernate** — reduced system latency by 35% through query optimization and connection pool tuning.
- Owned production stability — resolved 150+ incidents, maintained 99.8% uptime over the entire engagement.
- **Automated CI/CD pipelines with Jenkins** — cut manual deployment effort by 50% and tightened release cycles significantly.
- Integrated multiple third-party APIs — reduced inter-service failures by 25% and enabled clean data exchange between services.
- **Refactored critical modules** — improved code efficiency by 30% and reduced error rates across the board.
- **Wrote JUnit test suites** — improved test coverage across core modules and reduced regression bugs.

System Administrator · **IT Infrastructure Role, Pune** · 2020 – May 2022

- Managed on-premise server infrastructure, network configuration, OS-level troubleshooting, and access management — experience that directly shapes how I design cloud-native backends today.
- Handled security hardening and environment configuration — foundations that now feed into my RBAC, encryption, and secure API design work.

Competitive Exam Preparation · · 2015 – 2020

Focused on government competitive exams post-graduation — a deliberate period that built discipline and analytical thinking. Transitioned into IT infrastructure in 2020, then into Java development in 2022.

KEY PROJECTS

1. Payment File Processing System [\[NPCI Integration\]](#)

Stack: Java, Spring Boot, AWS S3, AES Encryption, Digital Signature, Bank APIs, Webhooks

- Receives XML/TXT mandate files directly from NPCI, processes them through validation, parsing, AES encryption, and digital signature verification, and sends the processed output back to NPCI in the required format — 100% data integrity across high-volume batches.
- Third-party bank API integration handles mandate verification, execution, and rejection flows with retry logic. All files stored on AWS S3 with audit-ready access logs. Zero production incidents since go-live.

2. Prakruti Parikshan [\[Ministry of Ayurveda, Govt. of India\]](#)

Stack: Java, Spring Boot, Spring Security, AWS S3, REST APIs, JUnit

- Government-commissioned health-tech platform that digitizes Ayurvedic body constitution (Prakruti) assessments — built both the mobile app and website.
- Two-role system: Volunteers run structured question flows via the app; the backend scoring engine maps answers to Prakruti types (Vata, Pitta, Kapha, or blends) using a configurable rule engine — no hardcoding.
- RBAC separates volunteer and user journeys; AWS S3 stores assessment reports with secure, role-scoped access. JUnit tests cover all scoring logic.

3. Raincheck — Social Feed App with Kafka-Powered Scheduler

Stack: Java, Spring Boot, Kafka, AWS S3, Twilio (OTP/SMS), Jenkins, JUnit

- Real-time social app with chat, feeds, and a built-in post/message scheduler — Kafka-based scheduling where events are produced at creation time and consumed at the exact delivery timestamp, no polling needed.
- Twilio handles OTP across registration, login, and profile updates via a shared abstraction layer. Jenkins pipeline automates build and deployment. JUnit covers scheduler and messaging service layers.

4. CPA Document Portal [\[PayPal Integration\]](#)

Stack: Java, Spring Boot, PayPal REST API, Dynamic RBAC, Spring Security, JUnit

- Three-role document platform (Admin, Sub-Admin, User) — users get one free document on signup; further access requires payment via PayPal, with the price configurable by Admin without any code changes.
- Dynamic RBAC: Admin can grant or revoke Sub-Admin API permissions in real time — no redeployment. PayPal webhooks handle async payment confirmation before access is unlocked.

5. Uru Uru — Music Marketplace [\[Stripe + Stripe Connect\]](#)

Stack: Java, Spring Boot, Stripe, Stripe Connect, AWS S3, Twilio, QR Code Integration, JUnit

- Artist-first music marketplace where each album/track gets a unique QR code — scanning it redirects to a Stripe Checkout page tied directly to that artist's Connected Account, so payments settle to artists instantly without the platform holding funds.
- Stripe Connect Standard model handles artist onboarding and fund routing. S3 stores audio, album art, and profiles in separate buckets. Admin manages verification, moderation, and analytics.

6. Pen & Page — AI Quotes Generator [\[Own Product | Live at penspaper.in\]](#)

Stack: Java, Spring Boot, Spring AI, OpenRouter API, Prompt Engineering — Live at penspaper.in

- Built and deployed a live quotes generation application using OpenRouter API — enables access to multiple LLM models through a single integration point. Users can generate contextual, theme-based quotes dynamically based on topic and tone.
- Implemented prompt engineering techniques to control quote style, length, and context via configurable parameters. Includes quote history feature. Live at penspaper.in

7. Document Talk — RAG-Based AI Chat System [\[Own Product | Live at talkswithdoc.in\]](#)

Stack: Java, Spring Boot, Spring AI, RAG Pipeline, OpenRouter, Vector Store, AWS S3 — Live at talkswithdoc.in

- Built and deployed a production-grade document chat system — users upload documents and interact with them via natural language powered by a RAG pipeline.
- Documents are chunked, embedded, and stored in a vector store; user queries are matched against relevant chunks and passed to an LLM for accurate, context-aware responses. Live at talkswithdoc.in

EDUCATION

CERTIFICATIONS & LEARNING

- GitHub Copilot Certification — GitHub, 2024
- Diploma in Java — FirstBit Solutions, Pune | Completed: Feb 2023 | Covered: Core Java, C, C++, Advanced Java, Data Structures, Hibernate, Spring Boot, SQL, PL/SQL
- Spring GenAI for Java Developers — Hands-on self-driven project (Spring Boot + Spring AI + LLM integration into production-ready APIs)

WINS WORTH MENTIONING

- **40% drop in system downtime** — through proactive monitoring and module-level performance fixes.
- **100% on-time delivery** — across every project over the last 3 years, no exceptions.
- **70% fewer deployment rollbacks** — improved CI/CD discipline and pre-release testing standards.
- **60% scalability improvement** — SaaS platforms now handle significantly more traffic without infrastructure changes.
- **150+ production issues resolved** — maintained 99.8% uptime at Maxgen over the full engagement.
- **2 live AI projects deployed** — Pen & Page (AI Quotes Generator) and Document Talk (RAG Chat System) both live on Railway.
