Pune, Maharashtra

PROFESSIONAL SUMMARY

Results-driven Senior Java Developer with 4+ years of experience designing, developing, and optimizing high-performance, scalable applications using Java, Spring Boot, Microservices, and AWS. Demonstrated expertise in fintech domain — including NPCI eMandate integration, mandate file processing, XML/TXT-based credit processing, encryption, and digital signature verification. Proven track record of delivering secure, cloud-native SaaS applications with measurable impact: 40% performance improvement, 50% reduction in deployment time, and 60% improvement in system scalability. Skilled in RESTful API design, CI/CD automation, and mentoring junior developers.

CORE TECHNICAL SKILLS

Programming Languages: Java, SQL

Frameworks & Libraries: Spring Boot, Spring MVC, Spring Security, Spring AI, Hibernate, REST APIs, Microservices

Cloud & Databases: AWS (S3, SQS, DynamoDB), MySQL, Database Query Optimization

DevOps & Tools: Docker, Git, Bitbucket, Kafka, SonarQube, CI/CD Pipelines

Security & Integration: Encryption, Digital Signature Verification, NPCI eMandate APIs, Third-Party API Integration, Role-Based Access Control (RBAC)

Domains: Fintech, SaaS, Web & Mobile Application Development, SDLC, Agile

AI & GenAI: Spring AI, OpenAI, Gemini, Ollama, LLM Integration, Prompt Engineering, RAG Pipelines, AI Chatbots, Retrieval-Augmented Generation

PROFESSIONAL EXPERIENCE

Senior Java Developer | Artcode Private Limited, Pune, Maharashtra

Nov 2023 – Present

- Engineered a NPCI eMandate integration module, exposing RESTful APIs consumed directly by NPCI — enabling end-to-end digital mandate registration for fintech clients.
- Architected a mandate file processing pipeline for debit transactions — validating, parsing, and persisting incoming mandate files with 100% data integrity across high-volume batches.
- Built a credit processing engine handling TXT and XML file ingestion — implementing file validation, AES encryption, digital signing, and signature verification to meet financial compliance standards.
- Optimized critical application modules using Spring Boot and Microservices architecture, improving overall system efficiency by 40% and reducing API response times by 50%.
- Directed end-to-end development of SaaS web and mobile applications, reducing time-to-market by 25% through streamlined SDLC practices.
- Enhanced system security by 30% through rigorous testing, secure coding practices, and implementation of role-based access control (RBAC).
- Mentored 5+ junior developers, reducing onboarding time by 40% and improving overall team productivity.

Java Developer | Maxgen Technologies Pvt. Ltd., Pune, Maharashtra

May 2022 – Oct 2023

- Engineered scalable web applications using Spring Boot and Hibernate, reducing system latency by 35%.
- Resolved 150+ production issues, achieving 99.8% application uptime and improving overall software reliability.
- Automated CI/CD pipelines, reducing manual deployment efforts by 50% and improving release cycle efficiency.
- Integrated third-party APIs, reducing system failures by 25% and enabling seamless data exchange between services.
- Managed debugging and code optimization initiatives, improving code efficiency by 30% and significantly reducing error rates.

KEY PROJECTS

- **Fintech Mandate & Payment Processing Platform** – Designed and implemented NPCI eMandate API integration, debit mandate file processing, and XML/TXT-based credit processing with encryption and digital signature verification. Ensured 100% compliance with NPCI standards.
- **School Management SaaS Application** – Improved system efficiency by 45% through scalable, cloud-based microservices architecture ensuring seamless school operations.
- **HRMS SaaS Application** – Guided payroll automation module development, eliminating manual errors and reducing payroll processing time by 50%.
- **Society Management Platform** – Built a highly responsive mobile and web platform using Spring Boot, improving user adoption rates by 35%.
- **TFG Microservice Integration with MoodleCloud** – Enhanced data accessibility across systems, reducing data retrieval time by 40%.
- **Case Management System** – Designed a role-based access control (RBAC) system, reducing unauthorized access incidents by 95%.
- **CPA Monolithic Application with PayPal Integration** – Ensured 100% secure payment transactions, meeting PCI-DSS compliance standards.
- **Spring GenAI for Java Developers (Self-Practice)** – Built AI-powered backend applications using Spring Boot and Spring AI — integrating LLMs (OpenAI, Gemini, Ollama) into Java applications. Implemented prompt engineering, developed RAG (Retrieval-Augmented Generation) pipelines with external data sources, designed context-aware AI systems with memory and conversation handling, and built real-world use cases including AI chatbots, intelligent APIs, and automation services following production-ready architecture.

KEY ACHIEVEMENTS

- Reduced system downtime by 40% through proactive performance monitoring and optimization.
- Achieved 100% on-time project delivery for all assigned projects over the past 3 years.
- Reduced deployment rollback incidents by 70%, ensuring greater production stability.
- Improved scalability by 60%, enabling seamless handling of growing user traffic on SaaS platforms.

EDUCATION

Bachelor of Engineering in Computer Science

Savitribai Phule Pune University, Pune, Maharashtra | *Graduated: 2015*

CERTIFICATIONS

- GitHub Copilot – GitHub Certification
- Spring GenAI for Java Developers – Self-Practice Project (Spring Boot + Spring AI + LLM Integration)
